Birth Year Statistics

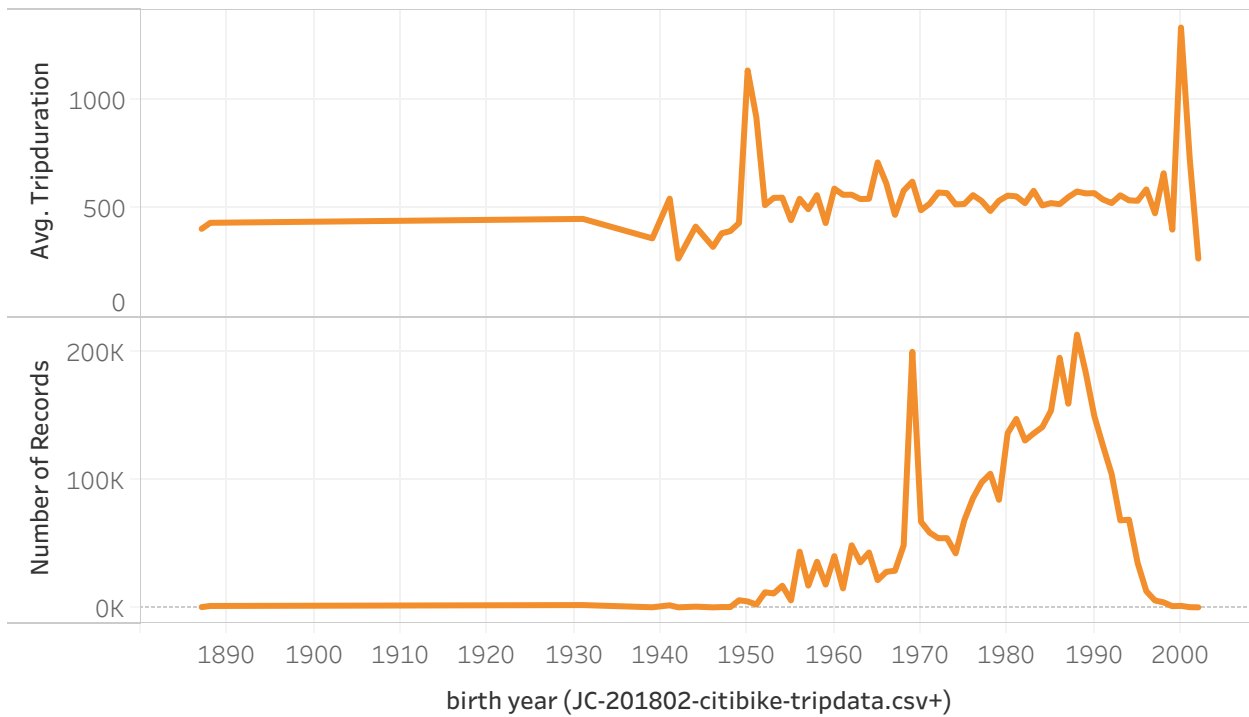

Start Stations

The vast majority of trips begin in the Liberty State Park area with the Grove Street Path being the primary starting station. The longest duration trips begin at the Bethune station.

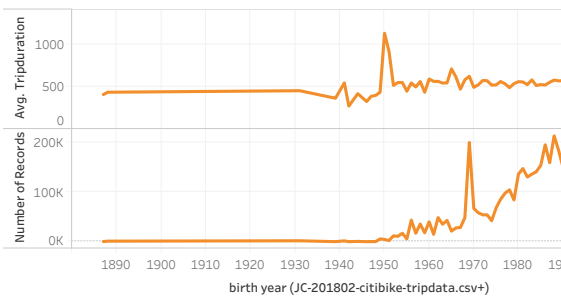

End Stations

Extreme lack of Data for end station records when compared with starting stations. The longest average duration trip was recorded at Garfield Station, but there was only a single record for that location so the data here seems largely unreliable. Perhaps there is a problem with data collection at the end stations.

Birth Year Statistics

Average trip duration by age spiked for ages 55-65 and ages 10-20. It is surprising the more elderly bicyclists go on longer rides on average than their more middle aged counterparts. There are similarly two spikes for number of bicyclists in those between 25-35 and another between 45 and 55.
